

HackYeah 2026 · TripAI

You have free days.
We tell you where and when.

Every price shows its source.

Ola has 7–11 Nov free. Where should she go?

Meet Ola. Free days, no plan.

Ola, 29, Kraków

Free 7–11 Nov: 2 days off → 5 days away.

Budget 1,800 PLN. Hates crowds.

“Where should I go, and are these the right days?”

What the market offers*

Agencies we checked: a price, no reasons.

Search sites: you must know where first.

89% want AI help planning trips. Only **12%** would let AI decide alone (Booking.com, 2025).

Our takeaway: trust is the gap. Ola needs to see the work.

Booking.com, Global AI Sentiment Report (2025), 37,000+ consumers, 33 markets.

*Our competitor review, October 2026.

Free days in, a checkable trip out

1 Travel DNA

14 swipes set your taste

2 One confirm

Proposes the next long weekend

3 Where

Ranked for those dates

4 Why now

From sourced numbers

Each price shows where it came from.

We say when a price isn't for your dates: the flight is a fare seen for other dates, the stay a city average. The source is named.

Return flight *≈ 202 PLN* est.

Google Travel Explore · fare seen for different dates... ↗

Stay, 4 nights · *≈ 1,348 PLN* est.

city average

Google Travel Explore · city average, not a specific hot...

Total (estimate) *~1,550 PLN*

Zoomed from Ola's Catania trip page (the app truncates long chips)

A quick check first. An LLM only when unsure.

HOW A TRIP GETS ITS VERDICT

1 A fixed formula ranks sourced data

Same inputs, same order

2 A small model checks the fit

Fit and confidence; the formula keeps the order

3 Unsure? The LLM breaks the tie

On the fit label only, never the order or a price; it writes the "why" from sourced numbers.

FIT-VERDICT AGREEMENT WITH TEAM LABELS, 20 TRIPS

Small model → LLM if unsure · ~3 s  **16/20**

Small model only (Jev) · 0.5 s  **14/20**

LLM only (GPT-6 Luna) · 6.5 s  **14/20**

Hand-written rules · 0 s  **10/20**

A 2-trip lead on n = 20, labels by the team (not blind): directional, not proof.

Median per verdict, incl. the written "why". Jev = TypeSafe's System-1 model · GPT-6 Luna = OpenAI's low-cost tier.

How we differ

Ola gave her taste. TripAI proposed when and where.

It searches all your free days

Next 90 days: 16 free windows (weekends, holidays, bridge days) → 34 priced options in one scan of Ola's profile.

It keeps watching, daily

A scheduled scan runs every morning; finds land in the in-app inbox, push only when worth it.

And assistants can call us (roadmap)

An MCP server, so ChatGPT and others can use TripAI's search and receipts.

Feature review by hand, 3 Oct 2026: none of Google Flights, Kayak AI Mode, Mindtrip or eSky MAIA combines your free days, your taste and sourced prices.

Built and tested

[Team name] · [Members, roles]

[one line per member: why they fit this problem]

Hallway tests, n = 3: nobody read the descriptions.

So we cut the text: price, estimate label and fit now show at a glance.

937

automated tests, all passing on main (4 Oct)

~2 s

to the ranked list on the live app (1.3–2.6 s);
the written “why” follows in ~3 s

AI use: built with Claude (Anthropic) coding agents; every PR reviewed by an independent AI agent, then smoke-tested. In the app, prices and the ranking score never come from an LLM.

We'll earn on bookings, never on ranking

Free recommendations and limited daily scans (hypothesis)

Affiliate ~2% of each booking, e.g. ~36 PLN per 1,800 PLN (assumed; no partners yet). Design rule: the ranking never sees commission data.

Premium ~19 PLN/month: more alerts, group trips (hypothesis)

Ola's #1: **Catania, 7–11 Nov**: the best of the options for her dates, within her budget (estimate), sources shown.

Long weekend 7–11 Nov. Where would you go?
